

# MODEL 512™ Crossbow Sight

Designed with Crossbow hunters in mind, the Model 512™ Crossbow sight utilizes the unique properties of holography to create optimal range scaling data in a heads-up display. A pre-calculated ranging scale is projected on the target and measures the back to the belly of a mature whitetail deer (18"). Simply position the base of the scale on the belly (see diagram next to the sight) and read from where the back intersects the scale – it's that easy. With the integral ranging pattern, there is no unnecessary body movement or added noise while in the stand. Both range information and aiming reticle are displayed within the same sight picture to quickly line up your shot.

Range Finder / Reticle

Deer Range Finder (Ranged at 30 yards)

The Model 512™ X-Bow comes with a Ballistic Shooting Table so you can better zero-in to the game you hunt!

The HWS® Model 512 is controlled under the Export Administration Regulations (EAR), and may not be exported without proper authorization by the U.S. Department of Commerce.
